Report on Recent Fatal Occurrence in Dawson Mine.

Dawson, N. M., November 4.—Coal dust was the predominant force in the explosion that wrecked Mine No. 2, of the Siag Canyon Fuel Company, October 22, killing 263 men, according to a statement issued to-day by Rees II. Beddow, State Mine Inspector. It has not been determined what ignited the dust.

not been determined what ignited the dust.

The statement declared that gas played little, if any, part in the explosion; that a week before the explosion the inspector had taken samples of air which were analyzed by the United States Bureau of Mines at Pittsburgh, and showed only 19-100 of 1 per cent of menthane. This, the inspector points out is very low for a mine of that character. He says in the last ten days experts have been scarching for gas, but have not found enough anywhere in the mine to show in a safety lamp test.
